

Private AI Suite

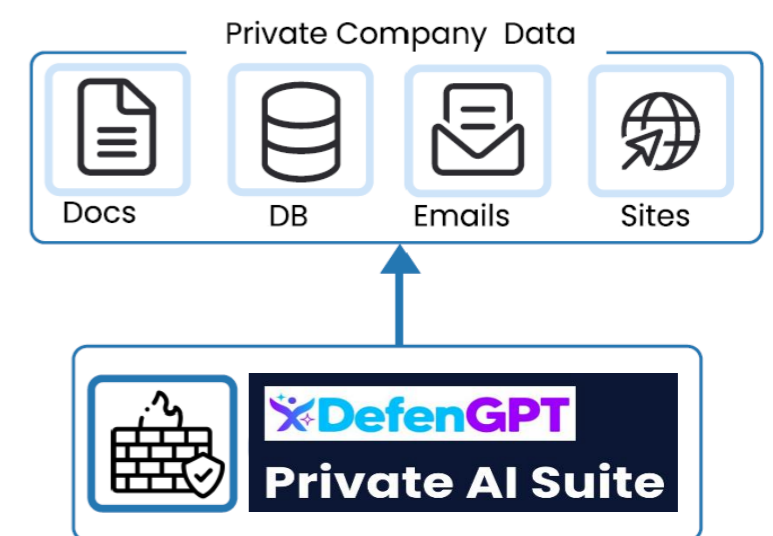

Secure private/on-prem end-to-end AI solution

Product Overview

DefenGPT AI Firewall helps businesses manage AI usage by Offering visibility, control, and risk mitigation.

Combining Governance and Security, the AI Firewall empowers Companies to control how AI services like ChatGPT, Copilot and Gemini are utilized while safeguarding sensitive data and enforcing organizational policies. This real-time solution is ideal for businesses that need robust AI Oversight, especially those in regulated industries.

For customers that don't want to take any risk of using Public AI services.

Key Capabilities

Knowledge Chatbot (RAG)

Generate answers from all company-connected sources and pre-trained knowledge.

Data Analysis

Analyze large datasets, generate reports, and visualize trends, through simple, natural language inputs.

Smart Search

Retrieve company content search results using a Private Hybrid search of Semantics and Keywords.

Key Features

Secure and Private Deployment: Available as a local/ on-prem or private cloud solution.

Grounding: Extracts and digests information from your company data, including emails, chats, meetings, CRM, websites, and knowledge bases.

Access Control: Generate answers based on source data access.
